

# SAT

## Labelling at the customer

### Autonomous system of traceability and visibility of goods.

#### FEATURES

- 1 SAT is a system able to access the information provided by the customer to forecast dodging the "bottlenecks" of other solutions.
- 2 SAT can integrate the different orders of other customer's ERP systems, identifying information, debugging and transmitting.
- 3 SAT gets minimize human intervention generally prone to mistake, setting automation according to corporate needs.
- 4 Since the beginning of the supply chain to delivery as "last mile" to the end client, a comprehensive monitoring is achieved.
- 5 Prediction logarithms according to the previous information accelerates LO's decision-making.

In an environment where the urgency in fulfilling delivery deadlines are vital to the business development of a LO, it becomes necessary to have information systems evolved, the ability to access the information provided by the customer and identify the goods from its origin and avoid the ever dreaded "bottlenecks" in the time of receiving orders.

To this end, at M.SOFT Worldwide we have created SAT as a necessary monitoring and traceability system as built-in and enhancing MYMSOFTERP solution.

SAT (Autonomous System of Traceability) is a software tool that can integrate with existing ship orders ERP systems at the customer or the charger through the exchange of EDI or data either by entering in manual mode upon receipt of the lists of orders, allows to identify the goods correctly by generating a label with barcode and transmit information purified with a unique identifier to the solution MYMSOFTERP.

All these processes can run unattended freeing the operator from repetitive tasks and eliminating or at least minimizing human mistakes and potential operational impact through a configurable automatic timer according to the varied needs and / or customer infrastructure.

These ERP systems enable logistics companies the possibility of offering its customers maximum visibility and traceability of shipments, so that the goods will be identified from the origin and will carry out a comprehensive and continuous monitoring by linking with "last mile" management tools that MYMSOFTERP solution provides.

The information contained in the label with the unique identifier is fully synchronized with data of the logistic company transport should any changes arise over time.

MYMSOFTERP solutions installed at customer facilities or through Internet, via Web-SAT, can cover every need adapting to specific operations and specific type of customer.

This module fully integrated in MYMSOFTERP application feeds the data supplied from the central server, as the ranges of shipment numbers, logistics platforms that make up the network of transportation, postal codes, services, types of goods, etc.

Thus once the identifying labels printed, the information is transmitted to the server transport company to advance and contrast services, by reading packages via bar code, the correct receiving of the goods and to detect possible misses or leftovers regarding the client manifest.

### M.SOFT Worldwide

Is since 1989 an Independent Software Vendor (ISV) for over 25 years of dedication to transport and logistics, developing and implementing software for comprehensive management operations (ERP/TMS/WMS) and software mobilization processes for the entire industry (MOBILITY), offering a scalable framework for our customers, with solutions adapted to the latest technologies and existing needs, reliable, proven and installed in our park.

### THE ORGANIZATION

Our team of consultants, experts in your business, will be able to give response to your business needs and advising you on improving your internal circuits and procedures, getting at all times to minimize implementation times on projects. The Excellence as service and development philosophy vocation, and Meeting the Expectations of our customers as a *raison d'être*, from a business vision focused to become your strategic partner, with which you can count on today and always to make every day more competitive and differentiate your organization in terms of technology.

### THE SERVICES

From M.SOFT Worldwide, we collaborate with our customers to make every day their organizations more competitive, through various ancillary services to the development of our solutions, being able to classify them according to the relationship stage as:

#### Assessment of opportunities

- Requirement customer analysis and data collection for preparation of prototypes
- Identify improvement opportunities on the current situation, based on the shift levers both technological and process
- Selecting the best solutions combination of our catalogue, which achieve better meet the needs and expectations of our customers
- Project evaluation and return on inversion analysis according to each customers individual indicators
- Support to the definition of the technology platform

#### Implantation

- Detailed analysis of business processes
- Implantation consulting of our solutions
- Identification and development of customers particularities
- Support to start/stabilization projects

#### Maintenance and evolutionary support

- Help Desk Level 2 support
- Maintenance and evolutionary support of our solution
- Evolutionary development particularity required by customer
- Implantation of new modules and functionalities

### THE SOLUTIONS

From M.SOFT Worldwide, we offer Information System Solutions specially conceived and designed to get the most out of your resources applied to its operations:

Complete management of your business as **Logistic Service Provider**, through our Integrated Management System (**ERP: Enterprise Resource Planning**)

Managing of your Transport and Warehouse operations, such as **Manufacturer or Distributor**, through our **TMS (Transportation Management System)** and **WMS (Warehouse Management System)**
