

RF MANAGEMENT

Radio
Frequency
warehouse
management

Tool for comprehensive goods management about internal warehouse processes.

FEATURES

- 1 Controls all processes of a logistic warehouse as entry, internal movements, picking, leaver and load transportation modal.
- 2 Possibility of reading the customer EAN directly per barcode codes.
- 3 Allows to do picking preparations via voice commands, freeing the trainer for proper handling.
- 4 Sending work orders to the operator via PDA or similar, according to priority and proximity criteria.
- 5 The system can make a historical tracking of activities performed by an operator or sending data device.

MYMSOFTERP solution provides RF management module for warehouse, empowering high productivity in normal and extreme environments. Allows full control over the goods to verify receipt of entries, internal transits processes, exits and orders of loads in transportation modals, adding value and efficiency in the traceability of goods. In the process of entry of the goods in the warehouse, MYMSOFTERP RF management module controls entry, receiving, unloading, identification, reading EAN customer code, testing, labelling and location. Also controls the internal movements, replacement of picking, relocation, supply, proximity, inventory and counting. Picking preparation can be done by full pallets or loose items, regardless of the device as PDA screen on the fork-lift truck, for arm or wrist device, using voice commands, etc. Also allows to control removal processes in order preparations and picking. Finally allows control of processes in transport loading such as the creation / load containerized load check. The RF management module is capable of sending a particular PDA device, previously parameterized ad-

hoc, work orders that are automatically assimilated by the resource and saves them as queued tasks. The operator can identify the location of the device in the warehouse, in order to receive queued tasks based on proximity, or otherwise, when first time reading and according to proximity criteria of the system, send to device work orders by priority task. While a task does not have an assigned resource, the system allows to assign this task to the operator, even to decide if it could be skipped it or not. The system can display the workload of consolidators, check the status of registration numbers allowing massive changes of movement, or show a historical of the activities undertaken by the operator and / or resource. From a PDA device is possible to: capture any registration number unrestricted priorities or resources and in entries and location processes; view all palletes, with peaks and mixed inclusive; establish a virtual reserve that does not deduct the stock until the confirmation of movements; complete an inventory / automatic counting; propose a pallet for a picking replacement whose location is empty.

THE ORGANIZATION

Our team of consultants, experts in your business, will be able to give response to your business needs and advising you on improving your internal circuits and procedures, getting at all times to minimize implementation times on projects. The Excellence as service and development philosophy vocation, and Meeting the Expectations of our customers as a raison d'être, from a business vision focused to become your strategic partner, with which you can count on today and always to make every day more competitive and differentiate your organization in terms of technology.

THE SERVICES

From M.SOFT Worldwide, we collaborate with our customers to make every day their organizations more competitive, through various ancillary services to the development of our solutions, being able to classify them according to the relationship stage as:

Assessment of opportunities

- Requirement customer analysis and data collection for preparation of prototypes
- Identify improvement opportunities on the current situation, based on the shift levers both technological and process
- Selecting the best solutions combination of our catalogue, which achieve better meet the needs and expectations of our customers
- Project evaluation and return on inversion analysis according to each customers individual indicators
- Support to the definition of the technology platform

Implantation

- Detailed analysis of business processes
- Implantation consulting of our solutions
- Identification and development of customers particularities
- Support to start/stabilization projects

Maintenance and evolutionary support

- Help Desk Level 2 support
- Maintenance and evolutionary support of our solution
- Evolutionary development particularity required by customer
- Implantation of new modules and functionalities

THE SOLUTIONS

From M.SOFT Worldwide, we offer Information System Solutions specially conceived and designed to get the most out of your resources applied to its operations:

Complete management of your business as **Logistic Service Provider**, through our Integrated Management System (**ERP: Enterprise Resource Planning**)

Managing of your Transport and Warehouse operations, such as **Manufacturer or Distributor**, through our **TMS (Transportation Management System)** and **WMS (Warehouse Management System)**

Mobilization processes, **for the entire industry**, through our **MOBILITY** modules multi-platform (on Smartphone or Tablet devices) specialized by industry or bespoke developed for your business

All of them we can offer both on purchase and rent mode and can be installed on customers own platforms or outside data center processing (Cloud) through partners who M.SOFT Worldwide provides for this purpose.

Request a remotely or in person demonstration of our solutions, and let us show you, how we can add value to your business.
